22 I'm a Las Vegas resident since I was born
 23 here. I'm 32 years old. I would like to see that the
 24 Secretary not recommend this site to the President for
 25 the reasons that studies haven't been completed. It

0035

1 seems to me that any results that are unsatisfactory
 2 have been thrown out and the process has been
 3 continued. It seems the me that this process couldn't
 4 continue with the fact that there is no Final
 5 Environmental Impact Statement and that the, I guess
 6 it's the Nuclear Regulatory Commission guidelines have
 7 not been set for this site.

8 I would see it, see the country and the DOE
 9 deal with this problem as proving the storage
 10 containers on site would make me as a Nevadan feel much
 11 safer if this product, the waste, was kept on site with
 12 storage containers that are going to be used here
 13 possibly proven onsite storage. I would also think
 14 that in the transportation study, that the communities
 15 involved on the route in the community I live in, which
 16 is Inyo County, California, southern Inyo County,
 17 doesn't have an emergency plan at all for breach of a
 18 container for any possible incident with the trucks.
 19 So assuming that's the situation for all communities on
 20 the transportation route, that if the public is not
 21 aware or has made preincident plans, that this process
 22 should not continue. That's about it.
