 --> Comment Text :
 I am opposed to the proposed repository at Yucca Mt. Nevada because I feel that the potential for inadvertant or intentional human interferance at the site over the course of 10,000 years is a factor that can not be effectivly accommodated for and prevented with passive institutional controls. The potential danger imposed on future generations therefore is immoral. The waste should remain where it now sits until better technology can be devised that can neutralize or recycle the spent fuel in a more productive and safer way.
