To whome it may concern,

1 [I do not support turning Yucca Mountain into a nuclear waste repository. This action would rob the natives, Shoshone people, of their sacred land were ceremonies and rituals are performed. It's like taking Christmas away from the pope.] ... *Continued below*

2 Furthermore [the site is not suitable for all the waste that would be burried there. The land has been ruled unreliable in relation to the original standards. Therefore, instead of finding a new site, the regulations have been manipulated to suite the site. This is what we like to call, working in the fast lane. Doing something as dangerous as dealing with nuclear waste at any level should be carefully and precisely researched.]

... 1 *Continued* Finally, [the accumulation of nuclear waste must be terminated. It is the longest lasting lethal substance on Earth. We have alternatives which are cleaner, easier, and healthier for all, not to mention cheaper. If we were to refrain from further nuclear processing, we would not have to worry about sentencing an entire community of indegenous folks a hazardous living environment for generations to come.

Please reconsider using Yucca Mountain as a nuclear waste site. Also, it would be wise to cease all nuclear processing immediatly, simply to eliminate a plethera of problems.]

thank you for your time and consideration,

Jacqueline Murray,
